Motorcycle Basics TechBook (2nd Edition)

Aimed at beginners to motorcycling and those starting motorcycle engineering courses, this book will provide the reader with a sound understanding of how motorcycle components function and how they have been developed. The chapters are arranged in a logical order, starting with a full explanation of the two- and four-stroke combustion processes, the different induction methods and the various engine configurations, then leading on to chapters on how fuelling and ignition are controlled, how the engine is lubricated and cooled, and an explanation of the many different types of suspension, frame and braking systems.

Motorcycle Fuel Systems TechBook

This book combines the subjects of carburation and fuel injection. The reader is taken from the basic operation of the carburettor and fuelling theory to the most sophisticated electronically controlled fuel injection in use today. The text covers the common carburettor and injection system types (including older designs), plus their supporting components such as air filters, fuel pumps and sensors.

Practical advice covers overhaul, set up and the use of diagnostic equipment, plus a whole section on fault finding.

His book provides the DIY mechanic with procedures and useful advice on servicing and minor repairs. The book is divided into six chapters covering the use of tools and how to build up a toolkit, how to use a service schedule and keep service records, how to carry out maintenance procedures on the engine, fuel and ignition systems, clutch, drive chain, tyres, suspension, brakes and electrical system. Many useful hints and tips are provided.
